CUBOTICS

LEGO STEM LAB

IGNITING INNOVATION

Incorporating Lego and Robotics into the Classroom with Enthusiasm!

About

Cubotics was Founded in 2015 by Kunal Sadarangani who is a Ex Commercial Pilot and a Electronic Engineer from Mumbai University. He is also a Lego 6 Bricks Certified Trainer and underwent his Lego Education Training in Singapore.

The Company was Founded from home in 2015 and today we have 5 Centres across Mumbai at Santacruz , Juhu , Andheri , Matunga and Ghatkhopar and will opening up new centres at Worli and Chembur in 2024.

Cubotics is Lego Robotics Education Company that imparts Knowledge in the most practical and fun way which is by getting students engaged and applying themselves.

LEGO STEM LAB

Importance of Lego Robotics in Classroom for Students:

Bridge the Gap between School & Higher Education

Hands on Learning

LEGO Robotics provides a hands-on learning experience, allowing students to apply theoretical concepts in a practical setting. This approach enhances understanding and retention of STEM principles.

Problem Solving

Building and programming robots involve solving real-world problems. Students learn to analyze issues, break them down into manageable parts, and devise solutions, fostering critical thinking and problem-solving skills.

Coding Skills

Programming the robot introduces students to coding concepts in a user-friendly environment. It helps them develop computational thinking, logical reasoning, and an understanding of basic programming structures.

Creativity and Innovation

LEGO Robotics encourages creativity in design and programming. Students can experiment with different solutions and express their creativity while solving challenges.

Preparation for Future Careers:

In an increasingly technology-driven world, skills in robotics, programming, and engineering are highly valuable. LEGO Robotics lays the foundation for these skills, preparing students for potential careers in STEM fields

Mission

Our Misson is to build a ecosystem focussed on leveraging technology in education where STEAM, Robotics & Coding are utilized as crucial tools for kids to be come smart in their academics and be able to solve modern world problems.

Vision

We aim to bring the fun and educational value of Lego Robotics to every classroom. By partnering with your School , we can provide the resources students need to learn core STEM concepts through hands-on Lego & Robotics projects.

Overview of Introducing Robotics & Coding to Students

- ## Provide Robotics kits and Trained Staff to schools

  Deliver Lego robotics kits and Trainers who use them effectively in the classroom.

- ## Develop engaging curriculum aligned to NEP Standards

  Create project-based robotics curriculum that teaches science, math, engineering concepts and aligns with educational standards.

- ## Cultivate partnerships between schools and Parents

  Parents once a year are shown the Projects done by the students over the year so this brings in a great realtionship between parents and the School.

- ## Give students opportunities to take Part in Competitions

  Students who are top of the class are given the opportunity to take part in competition's like the WSRO and WRO which not only showcase their talents but also gives them a insight into levels of Robotics.

Curriculum Highlights

- ## Coding challenges

  Students complete coding challenges in our programming curriculum that increase in difficulty over time to develop and stretch their coding skills.

- ## Group projects

  Students work together in small groups to design, build, and program robots using Lego Robotic & STEM kits.

- ## Grade-wise Lesson Plans

  Grade-wise lesson plans tailor educational content to students' developmental levels, ensuring age-appropriate learning experiences for effective comprehension and engagement.

CUBOTICS STEM LAB OFFERING

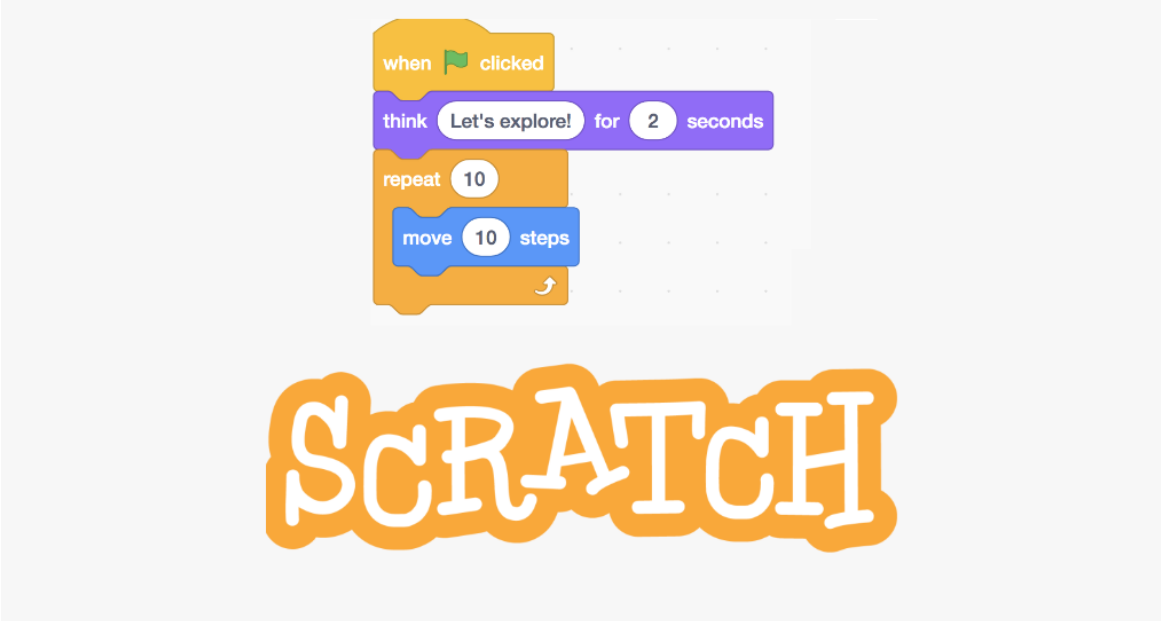

CUBOTICS STEM LAB ROOM

CODING CLASSES

CODING SOFTWARE PLATFORM FOR STUDENTS

Scratch 3.0 (Grade 3-5)

Scratch is a Block Based Programming language and online community where you can create your own interactive stories, games, and animations.

Python (Grade 6-10)

Python is a high-level, general-purpose programming language. Its design philosophy emphasizes code readability with the use of significant indentation.

CUBOTICS Coding Program features as per NEP 2020

The NEP suggests a flexible and multidisciplinary curriculum which includes coding, enabling students to organise their thoughts and improve logical thinking abilities, helping boost their academic success. CUBOTICS promotes digital literacy in the classroom by utilising ICT (Information & Communication Technology) tools and resources to create an engaging teaching-learning environment based on innovation and digital learning.

We offer schools a block based coding program with comprehensive activities for primary section students to establish and create a strong foundation in digital literacy and familiarity with digital tools.

Our python program for secondary students, provides them with a solid foundation in coding along with our other coding language programs, inciting computational thinking in students while leading them on the novel path of technology.

EDUCATIONAL ROBOTIC KITS

ESM EDUCATIONAL KIT

GRADE 1ST TO 2ND

WEDO 2.0 EDUCATION KIT

GRADE 3RD - 8TH

EDUCATIONAL ROBOTIC KITS

EV3 MINDSTORM ROBOTIC KIT

GRADE 9-10

(OPTIONAL)

SIMPLE AND POWERED ROBOTIC KIT

GRADE 4 TO 8

New National
Education Policy
2023 in India

NATIONAL CURRICULUM FRAMEWORK 2023

The Pedagogy and Curriculum outline of Cubotics aligns completely with the NCF 2023.

- PHYSICAL AND SENSORY DEVELOPMENT
- SCIENTIFIC TEMPER
- COMPUTATIONAL THINKING
- PEER LEARNING
- IMPORTANCE OF PLAY
- INCLUSIVE LEARNING
- EXPLORING NEW LEARNING AIDES

Methods of Teaching

The Methods of teaching outlined seem inclusive , visionary and fun

	Primary	Middle School	Secondary School

Robotics & Coding School Bundle Details

	Units	Rate	Amount	Grade
EARLY SIMPLE MACHINES	20	25,000	500,000	SR KG - 2ND GRADE
WEDO 2.0	20	35,000	700,000	3RD -8TH GRADE
SIMPLE & POWERED	20	25,000	500,000	3RD - 8TH GRADE

Units : 20 Robotic Kits for a class of 40 Students , Use Ratio 1:2

Each Grade curriculum incudes 32 Lesson Plans . Each Session is 1 hour.

Robotic sets will be provided to the School at NO COST.
