ROBOTICS & PHYSICAL AI TRAINING PROPOSAL

On Campus: Hands-on Robotics & Physical AI Programme

SCHOOL ROBOTICS LEARNING PROGRAMME

Proposal for Institutional Partnership

Cambridge Court High School, Jaipur

Prepared By:

My Equation (Tech Analogy Pvt. Ltd.)

NVIDIA Inception Partner | NASSCOM IT-ITeS Certified | IBM Startup Partner

01 Executive Summary

My Equation proposes a customised robotics and Physical AI learning framework for Cambridge Court High School students.

The programme follows a **build-first, hands-on approach**, taking students from foundational components and electronics through the assembly, programming, testing, and demonstration of functional robotic systems through structured team-based projects.

Offline classroom learning forms the core of the engagement, supported by an LMS for structured learning between sessions and a faculty-development component to strengthen the school's capacity to facilitate and sustain robotics learning.

Programme Type	Duration	Batch Size	Format
Hands-on Robotics & Physical AI	30 Days (~60 Hours) or 4 to 6 Months	80 Students (Teams of 6)	On-Campus + LMS
Core Technology	**Age Group**	**Delivery Partner**	**Faculty**
Robotics, Electronics, Embedded Systems, Physical AI	13 to 16 Years	My Equation	Faculty Development Included

What your students will gain:

- **Hands-on robot building** from individual components, not ready-made kits.
- **Programming experience,** from app-based control to writing and editing their own code.
- **Physical AI exposure:** robots that sense, decide and act, including AI-vision systems where configured.
- **A team project** applying their robot to a real challenge, presented at a final showcase.
- **LMS access** to revisit concepts and explore further between sessions.
- **Competition readiness support** for students keen to take their projects further.

COMMERCIAL PROPOSAL

Prepared For	Nature	Delivery Mode	Batch Size
Cambridge Court High School	Proposal	On-Campus + LMS	**80 Students**

Commercial Summary: Programme Investment

The investment has two parts: the programme fee and the robotics hardware. Both are listed separately below so that the school can see exactly what each covers.

Cost Component	Amount (INR)
A. Programme Fee Hands-on Robotics & Physical AI Training Programme	**₹7,500 per student**
Programme Fee for 80 Students	**₹6,00,000**
GST @ 18% on Programme Fee	**₹1,08,000**
B. Robotics Hardware / Kits (16-18 pcs) Indicative kit and robotics platforms **worth ₹10–12 lakh**, subject to the final configuration. The assets will be provided by My Equation for the duration of the training and handed over upon completion of the programme.	**Included**
Total Programme Fee including GST	**₹7,08,000**

COMMERCIAL NOTES

- The programme fee does not include robotics kits or hardware, which are listed separately under B.
- Figures are indicative. The final quotation will reflect confirmed programme duration, hardware configuration and lab requirements.
- GST is applicable as per Government of India statutory requirements.

02 Programme Deliverables and Objectives

The programme is structured around seven components, each linked to practical skills your students build during the engagement.

Sr. No	Objective	Deliverable & Outcome
1.	**Technical Training**	Hands-on training in robotics, electronics, embedded systems, sensors and programming using real hardware.
2.	**Robot Building & Applied Projects**	Teams assemble, program and integrate robots, then apply them to a team project presented at a final showcase.
3.	**Physical AI Exposure**	Exposure to sensing, AI vision and advanced platforms such as robotic arms, quadrupeds, humanoids and drones, depending on configuration.
4.	**Faculty Development**	Training for your teachers in robotics fundamentals, hardware, project supervision and evaluation.
5.	**LMS Access**	Supporting content in mechanical design, electronics, AI / ML, robotics and ROS, with quizzes and activities.
6.	**Competition Readiness**	Support for competition-style projects, internal competitions and presentation skills.
7.	**Robotics Lab Guidance**	Guidance on setting up a dedicated robotics lab, if the school chooses to establish one.

03 Programme Structure

Format A: 30-Day Intensive Programme

Approximately 60 instructional hours over 30 days, with daily timings aligned to your academic calendar.

Phase	Focus	What Students Do
Phase 1	Robotics & Electronics Foundations	Explore components, circuits and power; practise wiring in a simulator first.
Phase 2	Mechanical + Embedded Systems	Chassis, mounts and mechanisms; microcontroller basics; 3D-printed parts.
Phase 3	Hands-on Robot Building	Assemble robots in teams, wiring motors, drivers and sensors.
Phase 4	Programming + Integration	App control, then code; integrate sensors; test and debug.
Phase 5	Project Development	Apply the robot to a team challenge; iterate and refine.
Phase 6	Showcase & Competition Readiness	Demonstrate and present projects; competition-style challenges.

Format B: Extended Engagement (4 to 6 Months)

The same build-first approach over a longer period, allowing deeper practical work, multiple project cycles, advanced robotics, faculty continuity and competition preparation. A month-wise plan will follow once the duration is confirmed.

FOUNDATION ▸ **INTERMEDIATE** ▸ **ADVANCED** ▸ **PROJECT** ▸ **COMPETITION / SHOWCASE**

What a longer engagement adds:

- **Deeper practical work:** more hardware time for every student, with multiple project cycles that grow more challenging.
- **Advanced robotics:** progression to AI-vision, legged, humanoid, aerial and ROS-based systems, with mentorship for research-minded students.
- **Competition preparation:** time for competition-focused projects, mentoring and internal competitions.

04 Robotics Exposure

 **Mobile Robotics**	 **Robotic Arm**	 **Quadruped**	 **Drones**
 **AI-Vision Arm**	 **Humanoid**	 **Bionic-Eye Robot**	 **Camera Drone**

The final project mix will depend on the selected programme and hardware configuration.

05 Roles & Responsibilities

MY EQUATION	CAMBRIDGE COURT HIGH SCHOOL
• Programme design and hands-on instruction • Mentor support and project guidance • Faculty development and LMS access • Lab setup and hardware coordination • Competition-readiness support	• Suitable space and utilities • Student coordination and scheduling • Faculty nomination • School-level supervision • Procurement and approvals where applicable

For Institutional Approval

This proposal is submitted for review and approval by the leadership of Cambridge Court High School, Jaipur. My Equation is prepared to finalize the programme configuration and execute an MoU upon the school's confirmation.
